

Active Supply Chain Management

Customers worldwide trust Prorizon's
Procurement and Warehousing Operations

Solutions

Prorizon Procurement Ecosystem

To be effective today's fast moving business environment software must meet the following criteria:

1. **Value** - Bring ongoing measurable value to the organization
2. **Simplicity** - Make it easier for users to get their job done (fewer screens and less process steps)
3. **Adaptability** - The software must be flexible to support customers the way they want to run their business
4. **Agile** - Able to change as the business changes
5. **Integrate** - Easily plug-n-play quickly with your core systems and with reach across multiple countries

Prorizon's Active Supply Chain Management (Active SCM) system is an ERP light design yet comprehensive enough to meet the customer's needs for today and tomorrow. It's made up of 5 plug-and-play systems each of which can be used independently or together. It's engineered to maximize the through-put and management of a customer's supply chain ecosystem.

Active SCM is a SaaS system, accessible anywhere in the world without installing client software on the desktop. Using a standard web browser, organizations can automate paper-based manual supply chain procedures. We work with your organization to bend our software and operations around the way you need to do business while delivering **Controls, Accountability, Visibility and Standardization**.
